

METHOD OF SOFTWARE DISTRIBUTION BETWEEN PORTABLE COMPUTER SYSTEMS

ABSTRACT

- 5 A system and method for distributing software. A user of a hand held computer may demark files on a first hand held computer system. The user may also provide rating and summary information for the demarked files. The user may transfer rating and summary information for the demarked files to a second hand held computer. The user of the second hand held computer system may review
- 10 the rating and summary information. The user of the second hand held computer system may select to have copies of some of the demarked files transferred from the first system to the second system. In this novel manner, a user may automatically provide both recommendations and recommended software to other users, simultaneously improving both the quality of software distribution and the
- 15 number of paths of distribution.
